What are the two types of 12V inverters?

There are two main types of 12V inverters: sine and pure sine. Sine inverters produce a blocky signal, while pure sine inverters generate a wavy signal. Pure sine inverters are considered the best 12V inverter models because they produce a cleaner signal, which is better for expensive laptop and camera batteries.

What is a 6V to 12V converter (inverter)?

The PGPI is a 6V to 12V converter for vehicles that still have a 6V, positive ground electrical system. It is necessary if you are still running positive ground for all of our radios, which run on a 12V, negative ground electrical system. The PGPI positive ground inverter comes with detailed wiring instructions.

The Arduino part runs on 5V and the MOSFETs need 12V or more to work. So we must never connect 12V to Arduino, or it will burn instantly! The IR2110 ICs need two power supplies: 12V for the high-side MOSFETs. 5V for the logic section. If we mix up these power lines then the circuit will not work properly and the MOSFETs will not switch correctly.

I have Victron Phoenix 12V 1200VA (1000W) 120VAC output that has operating range between 9.2 ~ 17.3V, I never verify it though.
