Can I use a F700P inverter with a three-phase induction motor?

Do not use the F700P inverter with a load other than a three-phase induction motor or a dedicated IPM motor. Do not connect an IPM motor under the general-purpose motor control settings (initial settings). Do not use a general-purpose motor in the IPM motor control settings. Doing so will cause a failure.

An inverter is energy saving technology that eliminates wasted operation in air conditioners by efficiently controlling motor speed. Air conditioners maintain set temperature by cooling when room temperature rises above the set temperature and heating when the room temperature falls below the set temperature.
