Eaton's proprietary technology, embedded in the EPODs, guarantees a supply of highly energy-efficient critical power to the servers via Eaton's EnergyAware UPS - an advanced Uninterruptible Power Supply (UPS) that data centers can use to help grids integrate a higher proportion of variable renewables.

Our UPS provide a protected AC network with a configurable autonomy for use in case of black out. Reliable and simple to use, this power supply is for use in professional applications with technical constraints and difficult environmental conditions. ENAG proposes a large range of options to allow you to adapt your UPS to your requirements.

How does an uninterruptible power supply work, though? These systems bridge the gap between power failures and system reliability. The store will not work correctly in the case when cookies are disabled. ... Some more sophisticated UPS systems take things a step further with more advanced battery management features: Temperature compensation: ...

The wide range of products (up to 1,000kVA) with single or parallel configurations (up to 6MVA) can satisfy most of the different requests. EPI UPS qualified technicians can give all the technical support before and after sales, ...
