Online uninterruptible power supplies use a combination of rectifier and inverter to supply power to the AC load in normal operation. During a power failure, power is supplied with the support of an inverter. Conversely, an offline system supplies power from the AC mains to the load. An online system's output power supply stays on.

What is a UPS (Uninterruptible Power Supply)? A UPS is designed to provide immediate power backup in case of an electrical outage or disruption. It contains an internal battery system that takes over the power supply to the connected devices, ensuring they remain operational for a certain period after the primary power source has failed.
