Chargers for these non cobalt-blended Li-ions are not compatible with regular 3.60-volt Li-ion. Provision must be made to identify the systems and provide the correct voltage charging. A 3.60-volt lithium battery in a charger designed for Li-phosphate would not receive sufficient charge; a Li-phosphate in a regular charger would cause overcharge.

Chargers and settings. These are the chargers and settings that we recommend to customers. If your charger puts out 14.2 to 14.6 volts to the battery when charging on the AGM setting it will charge with Ionic lithium batteries.. Do not use chargers with "desulfation" mode or equalizer mode that charges above 15V.
