This meant that the vehicle was not operating with normal voltages and the 92 milliamp measurement should be ignored. Time to start over. I had already ordered a clamp-type ammeter but when it arrived I found that it could not be used as a "clamp meter" except in the very high current ranges (like 40 amps or more).

Lower Cost. Loop-powered devices are often much lower cost than other process control devices with built-in high power electronics. This is simply because the expensive components that could be included in these devices such as power supplies, mechanical relays, or advanced digital or analog signal output components are omitted in order to limit the ...
