

Moroni double glass components with aluminum frame

What is a double glass module?

The double glass module design offers not only much higher reliability and longer durability but also significant Balance of System cost savings by eliminating the aluminum frame of conventional modules and frame-grounding requirements. The application of double-glass modules covers multiple markets including utility, residential and commercial.

Are double glass modules better than traditional modules?

Compared to traditional modules with backsheets, modules with double glass are stronger and more durable, presenting less degradation due to thermal cycling stress. Results from the thermal cycling test up to 400 cycles show about 35% to 43% less degradation with double-glass modules than with traditional modules with backsheets (Fig. 3).

Are double-glass PV modules durable?

Double-glass PV modules are emerging as a technology which can deliver excellent performance and excellent durability at a competitive cost. In this paper a glass-glass module technology that uses liquid silicone encapsulation is described. The combination of the glass-glass structure and silicone is shown to lead to exceptional durability.

What is a double glass c-Si PV module?

Recently several double-glass (also called glass-glass or dual-glass modules) c-Si PV modules have been launched on the market, many of them by major PV manufacturers. These modules use a sheet of tempered glass at the rear of the module instead of the conventional polymer-based backsheet. There are several reasons why this structure is appealing.

What is glass-glass module technology?

In this paper a glass-glass module technology that uses liquid silicone encapsulation is described. The combination of the glass-glass structure and silicone is shown to lead to exceptional durability. The concept enables safe module operation at a system voltage of 1,500V, as well as innovative, low-cost module mounting through pad bonding.

Do double glass modules have a better resistance to PID?

Double glass modules have superior moisture barrier properties and are expected to have a much better resistance to PID. Four Double-glass modules were subjected to a PID test under different conditions (-1000V, 65% RH; C and 85% RH; C, 85% R.H.) for 96 hours.

Aluminum Doors and Frames BIM objects, families and systems are free to download in Revit or DWG formats for use with all major BIM and CAD software including AutoCAD, Sketch-Up, ArchiCAD and
