

Norway non-standard uninterruptible power supply quotation

How can end users choose their power supplier in Norway?

End users in Norway can freely choose their power supplier. The Norwegian Consumer Council in cooperation with the Norwegian Water Resources and Energy Directorate established the web site [strømpris.no](https://www.mpris.no), which provides an overview of prices and gives consumers the opportunity to switch suppliers.

How does Norway's power supply system affect price variability?

Renewable production and consumption levels in countries connected to Norway's power supply system also have an influence. The large proportion of hydropower in the Norwegian and Swedish production mix means that variations in water inflow to hydro reservoirs have a strong effect on price variability in the Nordic region.

How does Norwegian power supply differ from other European countries?

Hydropower accounts for most of the Norwegian power supplies, and the resource base for production depends on the precipitation in a given year. This is a significant difference for the rest of Europe where security of supply is mainly secured through thermal power plants, with fuels available in the energy markets.

Who manages the power supply in Norway?

Norway is part of a common Nordic power market and is integrated with the power market in Europe. The Ministry of Energy has the overall responsibility for managing the power supply in Norway. Opening speech at ONS 2022: The North Sea - the new frontier of energy transition?

Does Norway have a reliable electricity supply?

In business and industry, the public service sector and households, reliable access to electricity is a matter of course. A secure and reliable power supply is essential in any modern society. Norway has an extensive electricity grid for the transmission of power from producers to consumers.

What is the continuity of electricity supply in Norway?

The continuity of the electricity supply depends on both the frequency and the duration of interruptions in the supply. In Norway, continuity of supply is stable and very good, and is close to 99.99 % in years without extreme weather events. It has never dropped below 99.96 % in any year since 1996, see the figure below.

When choosing the right uninterruptible power supply, particular attention should therefore be paid to longevity, energy efficiency and reliability. While space-saving solutions are increasingly becoming the obvious choice due to the ever-increasing range of functions involved, the ability to communicate also plays an increasingly decisive role.

Renewable production and consumption levels in countries connected to Norway's power supply system also
