The larger power stations can have high capacity - for example the EcoFlow Delta 2 has 1024Wh and can supply a maximum power of 1800W to an appliance. This means that if you were running an 1800W hair dryer continuously using this power pack, it would last $\sim 1024/1800 = 0.56$ hours or 33 minutes before it was empty.

used can support variable airflow.) When the zone is at design sensible cooling load (right-hand side of the chart), this system delivers maximum supply airflow at the design supply-air temperature (SAT) for cooling (e.g., 55°F). As the zone cooling load decreases, supply airflow is reduced as needed to maintain the desired temperature in the ...
