Should solar energy be combined with storage technologies?

Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time energy is needed most. Peak power usage often occurs on summer afternoons and evenings, when solar energy generation is falling.

Why is PV technology integrated with energy storage important?

PV technology integrated with energy storage is necessary to store excess PV power generated for later use when required. Energy storage can help power networks withstand peaks in demand allowing transmission and distribution grids to operate efficiently.

Some review papers relating to EES technologies have been published focusing on parametric analyses and application studies.
