Different solar panels have varying voltage ratings, typically ranging from 12V to 48V. 12V panels are often used for small solar setups because they are compatible with 12V battery systems, which are common in RVs, boats, and off-grid applications. These setups typically require lower power and are easier to manage with smaller systems.

Solar panels typically produce between 10 and 30 volts, depending on the type, configuration, and conditions. Monocrystalline panels tend to produce higher voltages and are more efficient than other types of panels. ...
