

UK Solar Water Pump

What is a solar powered water pump?

Solar water pumps require no fuel and minimal maintenance. Solar powered submersible pumps are used for wells, boreholes, water transfer, cattle watering and irrigation. With the cost of solar pv modules falling dramatically around the world, solar powered pumping systems are becoming increasingly affordable.

What is a solar pump?

Solar pumps provide maximum water flow when it's needed most. Water storage in raised water tanks eliminates the need for any batteries. The highest standards of engineering are required for a reliable solar pump. We are authorised sales and service partners for the industry leading, German-engineered Lorentz range of pumps.

How do you use a SPS solar pump?

To use a SPS solar pump, place it beside the water source and insert the suction pipe into the water. Then, connect your outlet pipe to deliver water to your tanks or troughs. Finally, switch it on by connecting the supplied battery, and you'll have high pressure water on demand. The SPS solar pump can be placed up to 5 meters above the level of water.

What is a solar powered submersible pump?

Solar powered submersible pumps are used for wells, boreholes, water transfer, cattle watering and irrigation. With the cost of solar pv modules falling dramatically around the world, solar powered pumping systems are becoming increasingly affordable. There is a natural relationship between the availability of solar power and the need for water.

How does a solar water pump work?

All our solar water pumps use a special solar controller which will maintain the correct battery voltage, ensuring the longest lifetime possible of the battery.... Pump water from any remote location without needing access to electricity. Our pumps can operate in any remote location, pumping water at high pressure.

Who are solar pump solutions?
