How much money will China invest in lithium-ion batteries?

The total investment is estimated at 6,329 billion VND (\$275 million). Production is expected to begin at the end of 2023 with a target capacity of 5 GWh of lithium-ion battery cells (LFP) annually. That's the equivalent of about 100,000 battery packs (50 kWh each).

Which companies manufacture lithium batteries in Vietnam?

Korean electronics giants Samsung and LG also conduct lithium battery manufacturing in Vietnam. Samsung Electronics runs smartphone and appliance factories in Vietnam, and more than half of Samsung smartphones are made in Vietnam.

Who recycles lithium ion batteries?

Just last October, Li-Cycle, the largest lithium-ion battery recycler in North America, and VinES launched their global recycling partnership, under which the two sides are exploring global recycling solutions for VinES and VinFast.

How many lithium ion batteries will be produced in 2023?

Production is expected to begin at the end of 2023 with a target capacity of 5 GWh of lithium-ion battery cells (LFP) annually. That's the equivalent of about 100,000 battery packs (50 kWh each). VinGroup already started construction of the VinES Battery Manufacturing Factory, envisioned for battery packs (up to 100,000 per year).

Where in Vietnam is a battery factory located?

In Vietnam, VinGroup's VinES Energy Solutions and China-based global battery maker Gotion High-Tech started construction of their \$275-million battery factory in the central province of Ha Tinh's Vung Ang Economic Zone last November.

Is a battery energy storage system coming to Vietnam?

In September, solar and storage EPC and O&M provider Borrego selected Gotion High-Tech as a supplier of DC-block battery storage equipment for projects in the US, with deliveries scheduled to begin next year. Meanwhile, in Vietnam, the market for battery energy storage systems (BESS) has yet to take off.

Running a lithium battery pack at extreme SoC levels - either fully charged or fully discharged - can cause irreparable damage to the electrodes and reduce overall capacity over time. Implementing a proper SoC monitoring system to avoid prolonged periods of high or low levels is essential to extend battery life.
