16V LV system seems problematic. There are very few accessories that will take 16V. Inverters are either 12V (10-15) or 24V (20-30). Most things designed for 12V will handle up to maybe 14.5V, but not 16V. What is Tesla thinking? Did someone actually measured the output from the cigarette lighter?

I am thinking the problem there might be if it's one of the newer cars that has the 16V system instead of 12V. A lot of car inverters aren't built to be able to use voltage that high. I can't remember if a 2022 car had the newer 16V battery or not.
