Unless the window unit is "inverter-type," you need to size the inverter for the surge associated with the compressor start. An A/C unit that runs at 800W may need up to 4000W to start. An inverter needs to be able to handle that surge. MOST lightweight inverters that claim a 2X surge rating are insufficient to start an electric motor.

Here is a project of a 12V to 8V converter using the LM7808 IC, which subsequently lies in the category of Power supply circuits. Meanwhile, the circuit is utilizing an LM7808 IC to convert 12 volts DC supply to 8 volts DC ...

Robust 12 volt (10-28V) to 8 volt DC-DC reducers (also 24 volt to 8 volt) suitable for car, heavy vehicle, and truck electronics.

FYI - 1 48V 200Ah battery is 10,240Wh. 4 12V 200Ah batteries is also 10,240Wh. This is why there is no real difference (voltage and power wise) between 4 12V batteries in series and a 48V battery. Remember, a 12V LiFePO4 battery is really 12.8V. A 24V LiFePO4 battery is really 25.6V. A 48V LiFePO4 battery is really 51.2V.

What to keep in mind before running a load on the inverter. There are a few points to keep in mind before getting into calculation stuff, Which are the basics and you need to know. 1- Inverter efficiency rate. During the conversion of DC to AC, there will be a power loss. Depending on the inverter's efficiency rate the percentage of loss will vary.

There really isn't a good setup for that type to run a 12V inverter. 3 cells is just too low a nominal voltage, and 4 is too high. LiFePO4, tho, are almost perfect. a 4S pack has a fully charged voltage of 14.4-14.6, and a fully
