An Uninterruptible Power Supply (UPS) is a backup power system that ensures devices and equipment continue functioning during power interruptions. When the main power source (usually the electric grid) experiences a failure, the UPS ...

Uninterruptible Power Supply (UPS) The three major UPS configurations are offline (also called standby and battery backup), line-interactive and online double conversion. While online systems are the most complex and costly, they provide waveform conditioning during normal mains supply and are even becoming bidirectional to connect to smart grids.

In addition, uninterruptible power supplies can provide a backup in case the mains voltage drops below an acceptable level. Uninterruptible power supplies also allow the control system to be fully integrated into a wide range of commercial and industrial applications.
