Do you need an uninterruptible power supply (UPS)?

If you have important electronics that have to keep running when the power's out, you'll need an uninterruptible power supply (UPS). We've reviewed our recommendations and are confident these are still the best UPS devices you can buy. Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day.

What are the best ups with built-in backup batteries in 2025?

So, whether you're protecting a home office, gaming setup, network infrastructure, or security devices, here are the best UPS units with built-in backup batteries available in 2025. The APC Back-UPS Pro 1500VA is a top-tier choice for those needing reliable power backup for their critical devices.

What are the best UPS devices?

So what follows is a considered and varied list of best UPS devices, which should sort you out in a pinch. If you refuse to settle for anything less than the best, the APC Back-UPS PRO 1500VA is the right uninterruptible power supply for you.

Does an ups have a battery & a power supply?

In most cases, an UPS incorporates a battery, a surge protector and a power supply in one unit, but most uninterruptible power supplies also have additional filters (RFI/EMI noise filtering and Automatic Voltage Regulation or AVR) that protect your equipment in case of brownouts, without relying on the battery power.

Which APC UPS battery backup surge protector is right for You?

For those seeking a budget-friendly option, the APC UPS Battery Backup Surge Protector BE425M offers fantastic value without compromising on essential features. With a 425VA/225W capacity, it provides enough power to safely shut down computers and small electronics during outages.

How does a ups work?

A UPS can keep your network up and running while the power company restores the juice, even if that takes hours. When power cuts out, the UPS's battery kicks in. It delivers expected amounts over all connected devices until the battery's power is exhausted.

An uninterruptible power supply (UPS) is an enhanced battery system that activates itself in the event of a power failure and acts as the primary power source until electronic equipment can be safely shut down. The purpose of a UPS is to maintain consistent power levels and prevent fluctuations that could damage digital or mechanical equipment.
