In solar lights and a solar photovoltaic (PV) lighting system, the solar energy is converted into electricity and stored in a battery used to power a bulb (usually LED one) during the evening and night hours. Solar lighting systems are known for their high energy efficiency, high reliability, lack of maintenance, and substantial practical value.

LED lights come in various colour temperatures, from darker cooler hues to brighter, warmer ones that provide a soft and welcoming glow. LED lights can also be dimmable, depending on your needs and systems. Our team can get your LED systems to create the colour that you would like for your property.
